

PHENOM

- Lounge Chair
- Ottoman
- Coffee Table

Phenom finds its inspiration from one of the most interesting structures in geometry, the pyramid. This whole range of chair, ottoman and coffee table is inspired by the pyramid. The four legs of the Phenom chair bend inward to meet at the apex under the seat, forming the pyramidal structure in negative space. The apex is formed closer to the front leg, making the rear rods take the longer reach, to provide stability and overall visual balance. The upper structure complements the under structure as its inspiration is from the silhouette of Sphinx. The under structure of the coffee table forms a regular pyramid in negative space.

Phenom range is intended to be used for occasional seating solutions in office waiting areas, informal discussion zones, break-out zones, library area etc. It could be coupled with ottoman for office suites and homes.
