

PULSE Talking Points

PULSE

Elegance • Simplicity • Performance

Mesh Back

- Pulse chair back is upholstered with self-supporting mesh. Mesh allows moisture to evaporate from the skin. For this reason, “breath ability” is often considered as one of the major user benefits for mesh seating.

Seat Depth Options

- Typically a taller person will require more seat pan length and a shorter person will require less. Pulse chair is a unique chair that offers variable seat depths with two different seat sizes you can chose from.

Synchronized recline

- Synchronous recline — The motion of the seat back is linked with partial motion of the seat pan to maintain proper lower body and lumbar support throughout the recline motion.
- Its multi position locking makes you comfortable while performing various tasks.
- Easy accessible and user friendly adjustment controls including tension knob and seat height adjustment lever allows you to customize your chair perfectly for instant comfort.

Height Adjustable Arms for work chairs

- Height adjustable arms for perfect support, to adjust as per individual body size. Adjusting height of arms as desired, will make it easier for users to keep their shoulders in a neutral posture. By adjusting arm height user can move closer to their work surface and still make effective use of the backrest.

Height Adjustable Neck Rest

- Adjustable height neck rest can be adjusted, Up – Down and rotated for proper neck support.
